

# CC2520-CC2591EMK Quick Start Guide

## 1. Kit Contents

2 x CC2520-CC2591EM and antennas  
Documentation

## 2. Plug EM into SmartRF05EB

The CC2520-CC2591EM can be plugged into the SmartRF05EB or the CCMSP-EM430F2618. Please refer to the CC2520DK User Guide for more information about these boards.

## 3. Download Software from web

In order to run a packet error rate (PER) test with the CC2520-CC2591, it is necessary to download updated software from the [www.ti.com/cc2520dk](http://www.ti.com/cc2520dk) web page. The CC2520 software examples include a hex file that can be programmed on the CCMSP-EM430F2618 board (no compilation required) with the MSP430 FET tool. Use our Flash Programmer ([www.ti.com/lit/zip/swrc044](http://www.ti.com/lit/zip/swrc044)) for this purpose.

## 4. Packet Error Rate (PER) Test

When the board has been programmed with the PER test, the board should start up and the LCD will display the screen as shown in the picture above. The number in the parentheses is the revision of the CC2520. Press Button 1 to continue.

## 5. Select Channel

Select one of the 16 IEEE 802.15.4 channels, with channel number from 11 to 26 (2405-2480 MHz, 5 MHz channel spacing). The channel is selected by navigating the joystick to the right or left. Confirm the selection by pressing Button 1.

## 6. Set up the Receiver

Set one of the boards to operate as receiver. Use the joystick to select mode. Confirm the selection by pressing Button 1.

## 7. Select High/Low Gain

Select high gain mode or low gain mode of the LNA (low noise amplifier) on the CC2591 (see CC2591 datasheet for details). For best sensitivity, use high gain mode. Low gain mode may be used for close-in reception in order to avoid saturation of the receiver.

## 8. Ready to Receive

The receiver will now wait for packets from the transmitter.

## 9. Set up the Transmitter

Set the other board to operate as transmitter. Use the joystick to select mode. Confirm the selection by pressing Button 1.

**10. Select Output Power**

On the transmitter node, select the TX output power (signal strength). This adjusts the strength of the signal coming from the CC2520 to the CC2591. The displayed value is the amplified signal from the CC2591. Use the joystick to select between -1, 11, 14, 16 or 17 dBm. Confirm the selection with Button 1.

**11. Select Number of Packets and Packet Rate**

Select burst size (number of packets to send) by using the joystick, either 1000, 10K, 100K or 1M packets. Confirm the selection with Button 1. On the next menu step, select Packet Rate in the same way.

**12. Start PER test**

The PER test can now be started on the transmitter by pressing the joystick. The transmitter will display the number of packets sent, while the receiver will display the RSSI and PER values.

**13. Observe PER and RSSI**

The PER test receiver will display the PER value (number of lost and erroneous packets divided by the total number of packets sent, displayed as a fraction of 1000). It will also display a moving average RSSI value (received signal strength). The test can be reset by pressing Button 1.

**14. SmartRF Studio**

SmartRF® Studio supports the CC2520-CC2591. When the board is connected directly to the SmartRF05EB, it is possible to tick the CC2591 box in the "Range Extender" pane.

Studio will then configure some GPIO pins on the CC2520 to control the command signals of the CC2591.

**15. More Information**

For more information about the CC2591, please visit the product web page on [www.ti.com/cc2591](http://www.ti.com/cc2591).

**Kit and Software**

The source code for the PER tester and EM reference design can be downloaded from the CC2520-CC2591EMK web page. The latest version of SmartRF® Studio can be downloaded from [www.ti.com/smartrfstudio](http://www.ti.com/smartrfstudio)

You can also download the latest IEEE 802.15.4 MAC or the TI ZigBee stack (Z-Stack) from the web.

We hope you will enjoy working with the CC2591 and associated Low-Power RF products from Texas Instruments.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
